OBJECTIVE

Computer Science student with experience building full-stack web applications, automation tools, and game systems. Seeking an OJT opportunity where I can contribute to software development projects while expanding my experience in modern web technologies and backend systems.

EDUCATION

Bachelor of Science in Computer Science
Cavite State University - Main

Expected Graduation: 2027

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, Java, Dart, GDScript
- **Frontend & Mobile:** React, React Native, Flutter
- **Backend & Databases:** Node.js, Supabase, PostgreSQL, MySQL
- **Game Development:** Godot Engine
- **Tools & Technologies:** Git, GitHub, Vercel, Playwright, BeautifulSoup, EbookLib, WeasyPrint
- **Specializations:** Web Scraping, Data Processing, Automation, EPUB Generation, PDF Generation, Technical Documentation,

PROJECTS

Wais Wallet — Finance App | Co-Developer
Tech Stack: React, TypeScript

- Collaborated in a 2-person development team to build a budgeting and finance tracking application featuring expense tracking, savings management, and budget pockets.
- Developed interactive financial dashboards and data visualizations for spending analysis and budget monitoring.
- Built reusable React components and responsive user interfaces to improve maintainability and user experience.
- Contributed to frontend architecture and feature implementation across the application's core financial workflows.

Webnovel Extractor — Content Pipeline Tool | Sole Developer

Tech Stack: Python, Playwright, BeautifulSoup

- Built an automated content extraction pipeline that processed 1,000+ chapters across 8 web novels from multiple online sources.
- Implemented support for both static and JavaScript-rendered websites using Playwright and BeautifulSoup.
- Developed HTML normalization and cleaning workflows to handle inconsistent page structures and malformed content.
- Automated EPUB generation with metadata and table-of-contents support, eliminating manual compilation and formatting workflows.

UniQuest — Mobile Productivity App | Lead Developer

Tech Stack: Flutter, Dart, Supabase

- Led a team of 4 developers in building a gamified productivity application for university students.
- Designed and implemented task, mission, and reward systems to encourage consistent productivity habits.
- Integrated Supabase backend services for real-time data synchronization and user progress tracking.
- Developed cross-platform mobile interfaces and coordinated feature development across the application's core systems.

FREE FREE FREE — Indie Narrative Adventure Game | Co-Developer

Tech Stack: Godot 4.6.1, GDScript, Git

- Collaborated in a 2-person development team to develop a narrative-driven adventure game set within a simulated 2005 desktop environment.
- Implemented gameplay systems including player interaction and progression logic.
- Developed enemy AI using NavigationAgent3D, implementing real-time pathfinding and player pursuit behaviors across multiple game environments.
- Designed and integrated 3 narrative-linked minigames (Tic-Tac-Toe, Maze, and Flappy Bird-inspired gameplay) that contributed to story progression.
